

M2 INDUSTRIAL

You'll make more money with the DTG M2 than any other garment printer on the market.

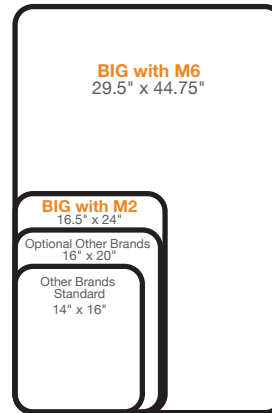

The M-Series outputs more garments in less time without sacrificing print quality – screen printers, embroiderers, online retailers, photographers, print shops, designers and store front retailers finally have a solution that's industrial and flexible! The M-Series delivers greater profit potential with entirely new engineering.

The future is now in direct to garment inkjet printers! The new DTG M2 T Shirt Printing Machine sets new standards for speed and versatility at a price point as much as \$30,000 less than similarly performing machines. The M2 T Shirt Printing Machine delivers the industry's most advanced print platform – engineered specifically for textile applications.

Utilizing a full range of platen sizes that allow for four smaller images (even sleeves & pant legs), two standard images or one oversize image – the M2 is the most versatile digital direct to garment printing machine in the world today. By the way – did we mention that it is also one of the fastest as well?

The ability to print on multiple garments at the same time means that you have to interact with the machine fewer times in order to complete a project, so all of your projects take less time. More time for you to sell more, take orders, handle incoming calls and overall just make more money!

Most people looking into direct to garment printers have never seen them in action... really in action... so they can see what producing an order is like with a DTG printer. Contact us to see a live webinar or get a link to a recorded demonstration where we go from graphic to custom t shirt ready to ship!

Specifications

- Printhead** – Piezo 180 nozzles per channel
- Color** – CMYK-W or Dual CMYK
- Print Area** – 24" x 17.7"
- Drive** – Processor driven conveyor
- Inks** – P30i Pigment Inks
- Ink Delivery** – Bottle – pressurized CYMK, Bottle – pressurized re-circulation – white (WIMS)
- Operating System** – Microsoft Vista, XPRIP, Windows 7-10
- Electrical** – 110-240VAC/10A, 50-60Hz
Consumption: 55W or less, Standby -5W, Off – 1W
- Physical Dimensions** – 48"W x 21.7"H x 39"L
- Weight** – 212 lb (boxed weight will vary)

Double your revenue printing two shirts at a time – or spend less time printing as compared to dated single shirt printing machines.

Interchangeable TUCLOC® PALLET SYSTEM

Our exclusive platen system increases production speed. 2 Shirts OFF, 2 shirts ON makes for more shirts per hour.
Print More = Earn More.
